Existing Crop Groups and ASTA Spice List Tolerances

Below is a non-exclusive list of current pesticide residue tolerances listed in 40CFR as of February 16, 2021. This list is limited to individual spices as included on the ASTA spice list and the crop groups in which they are listed and does not include any other tolerances applicable to any food.

This list is complete to the best of ASTA's knowledge; however, the U.S. Environmental Protection Agency (EPA) retains the ability to alter tolerances at any time—therefore, it is the user's responsibility to verify any tolerances rather than relying solely on the language contained within this document. Users may refer to the electronic Code of Federal Regulations (eCFR), updated daily, to verify pesticide residue tolerances of interest.¹

Additional considerations related to the use of this document are listed below.

Updated Crop Groups:

EPA has amended the herbs and spices crop groups previously published as Crop Group 19: Herbs and Spices, effective January 5, 2021.² These commodities are now separated into two new crop groups, "Crop Group 25: Herb Group" (**Appendix 4**) and "Crop Group 26: Spice Group" (**Appendix 5**). EPA added additional commodities to both crop groups.

EPA notes that the goal of this revision is to enhance the agency's ability to conduct food safety evaluations for tolerance-setting purposes and to further increase the benefit of the crop grouping system for those involved in commercial agriculture and trade.

In accordance with 40 CFR 180.40(j), Crop Group 19 will remain in the CFR until all relevant tolerances associated with Crop Group 19 and its subgroups have been updated to comply with the newly established Crop Groups 25 and 26. All new tolerances will be established on Crop Group 25 or 26. No tolerances have been established or updated that pertain to the new Crop Groups as of February 12, 2021. As such, Crop Group 19 tolerances are included in this document.

Important Tolerance Considerations

The established tolerances cited in this document refer to the total maximum residue limits allowable on spice and herb commodities. Under section 408(a) (21 U.S.C. 346a(a)), a pesticide chemical in or on food is considered adulterated if:

1. A pesticide chemical residue exceeds the specified tolerance (40 CFR 180 Subpart C – Specific Tolerances); or
2. No tolerance for the pesticide chemical residue has been established and no exemption from the requirement of a tolerance exists (40 CFR 180 Subpart D – Exemption From Tolerances)

Therefore, when a tolerance is not established on this list for a commodity, the default tolerance in the United States is zero. Any spice or herb imported that contains a pesticide with no established residue will be considered adulterated. If a crop is considered adulterated, it may be seized by the U.S. Food and Drug Administration (FDA), the U.S. Department of Agriculture (USDA), or a state enforcement agency.³

Pending Spice Tolerance Petitions

ASTA has an initiative to submit petitions for the establishment of new U.S. import tolerances for spices. Initially, ASTA successfully advocated for EPA to align with the Codex process to use monitoring data to establish MRLs on spices. This process is substantially less burdensome than the typical import tolerance application process which requires that import tolerance petitions be based on field trial data. Nonetheless, the petition process is still extensive and timely even with the revised data requirements. ASTA's petitions to date have been primarily focused on black pepper. A summary of each of the pending petitions is below:

- **Metalaxyd**: The metalaxyd petition for “pepper, black” was submitted to EPA on 12/3/2019 and has a PRIA completion date of 7/3/2021. This is the first petition to be submitted using monitoring data. The scientific review is complete, and the petition is now undergoing administrative review. The pending tolerance is for 0.3 ppm.
- **Difenoconazole**: The difenoconazole petition for “pepper, black” was submitted to EPA on 3/31/2020. The submission is currently undergoing scientific review. We are awaiting an official PRIA completion date, but based on the regulations, the review time should be 15 months.

Processed Commodities:

Generally, pesticide tolerances are established on raw agricultural commodities, but in some cases, there may be a separate tolerance established for processed commodities. EPA regulations state that if a processed commodity is derived from an agricultural commodity for which there is an established tolerance, the process commodity is not adulterated – however, the residue on the processed commodity may not exceed the tolerance on the agricultural commodity. Therefore, if the process concentrates that residue and there is not a separate established residue, the resulting product would be out of compliance.

The established guidelines surrounding dehydration factors are as follows:

- If there is NOT an MRL for a specific pesticide for a processed food in its concentrated or dehydrated form, AND
- The processed food consists primarily of one ingredient, AND
- The product is sold in a form requiring further preparation prior to consumption (e.g., fruit juice, concentrates, dehydrated vegetables, and powdered potatoes)

Web: www.astaspice.org

If all of these factors are met, then the tolerance should be evaluated on the basis of the commodity “as consumed” basis. The product should then be examined for residues after reconstituting to the commodity's normal moisture content.

A tolerance may either be established on a single commodity – such as black pepper, or it is also possible for tolerances to be established on a group of commodities.

FDA is responsible for enforcing residues on foods, which typically occurs at import. Further, the FDA publishes an annual monitoring report,⁴ which demonstrates that the testing of spices is low.

Spices

Non-exclusive list of pesticide tolerances that are specific to commodities as listed on the ASTA Spice List.

Basil Leaves (Sweet)

- § 180.185(1) Dimethyl tetrachloroterephthalate (DCPA) (indirect or direct residue), dried leaves, 20.0 ppm
- § 180.185(2) Dimethyl tetrachloroterephthalate (DCPA) (indirect or direct residue), fresh leaves, 5.0 ppm
- § 180.328 Napropamide, 0.1 ppm
- § 180.491 Propylene oxide, residues for reaction product propylene chlorohydrin, dried leaves, 6000 ppm
- § 180.513 Chlорfenapyr, fresh leaves, 80 ppm
- § 180.579(1) Fenamidone, dried leaves, 200 ppm
- § 180.579(2) Fenamidone, fresh leaves, 300 ppm
- § 180.627(1) Fluopicolide, dried leaves, 200 ppm
- § 180.627(2) Fluopicolide, fresh leaves, 40 ppm
- § 180.637(1) Mandipropamid, dried leaves, 200 ppm
- § 180.637(2) Mandipropamid, fresh leaves, 30 ppm
- § 180.685(1) Oxathiapiprolin, dried leaves, 80 ppm
- § 180.685(2) Oxathiapiprolin, fresh leaves, 10 ppm
- § 180.950 Tolerance exemptions for minimal risk active and inert ingredients. Unless specifically excluded, residues resulting from the use of the substances listed in **Appendix 6** as either inert or an active ingredient in a pesticide chemical formulation, including antimicrobial pesticide chemicals, are exempted from the requirement of a tolerance under FFDCA section 408, in such use is in accordance with good agricultural or manufacturing practices. Applicable on commonly consumed food commodities, including herbs such as basil, anise, or fenugreek and spices such as cinnamon, cloves, and red pepper.

Capsicums (Pepper)

- §180.129 o-Phenylphenol and its sodium salts, bell, 10 ppm
- § 180.253 Methomyl, bell, 2 ppm
- §180.303(1) Oxamyl, bell, 2.0 ppm
- §180.303(2) Oxamyl, nonbell, 5.0 ppm

- §180.355 Bentazon, nonbell, 0.05 ppm
- §180.368 Metolachlor, tolerance with region registrations established for the combined residues (free and bound) of the herbicide metolachlor and its metabolites, determined as the derivatives, 2-[2-ethyl-6-methylphenyl]amino]-1-propanol and 4-(2-ethyl-6-methylphenyl)-2-hydroxy-5-methyl-3-morpholinone, each expressed as the parent compound, in or on the following raw agricultural commodities, nonbell, 0.50 ppm
- §180.378 Permethrin, bell, 0.5 ppm
- §180.380 Vinclozolin, revoked tolerances subject to the channel of trade provisions, bell, 3.0 ppm
- §180.433(1) Fomesafen, bell, 0.025 ppm
- §180.433(2) Fomesafen, non-bell, 0.025 ppm
- §180.442(1) Bifenthrin, bell, 0.5 ppm
- §180.443(2) Bifenthrin, nonbell, 0.5 ppm
- §180.553 Fenhexamid, nonbell, 0.02 ppm
- §180.579 Fenamidone, nonbell, 3.5 ppm
- §180.651(1) Imazosulfuron, bell, 0.02 ppm
- §180.651(2) Imazosulfuron, non-bell, 0.02 ppm
- §180.654 Isopyrazam, bell, 0.50 ppm
- §180.950 Tolerance exemptions for minimal risk active and inert ingredients. Unless specifically excluded, residues resulting from the use of the substances listed in **Appendix 6** as either inert or an active ingredient in a pesticide chemical formulation, including antimicrobial pesticide chemicals, are exempted from the requirement of a tolerance under FFDCA section 408, in such use is in accordance with good agricultural or manufacturing practices. Applicable on commonly consumed food commodities, including herbs such as basil, anise, or fenugreek and spices such as cinnamon, cloves, and red pepper.
- §180.1016 Ethylene; exemption from the requirement of a tolerance, pepper (**Appendix 7**)
- §180.1020 Sodium chlorate; exemption from the requirement of a tolerance, nonbell (**Appendix 7**)
- §180.1087 Sesame stalks; exemption from the requirement of a tolerance for residues of the biorational nematicide sesame stalk in or on pepper, bell (**Appendix 7**)
- §180.1127 Biochemical pesticide plant floral volatile attractant compounds: cinnamaldehyde, cinnamyl alcohol, 4-methoxy cinnamaldehyde, 3-phenyl propanol, 4-methoxy phenethyl alcohol, indole, and 1,2,4-trimethoxybenzene; exemptions from the requirement of a tolerance (**Appendix 7**)
- §180.1261 *Xanthomonas campestris* pv. *vesicatoria* and *Pseudomonas syringae* pv. tomato specific Bacteriophages, exemption from the requirement of a tolerance (**Appendix 7**)

Appendix 7

The following pesticides are exempted from the requirement of a tolerance on the specified commodities. However, specific conditions of use apply for each exemption. To ensure compliance and to avoid adulteration, please refer to the complete CFR reference listed for a comprehensive explanation of the acceptable conditions of use and application.

Table 1. Exemptions from the requirement of a tolerance for specific herbs and spices contained within the ASTA Spice List.

Commodity	Pesticide	CFR Reference
Capsicums (Pepper); Onion; All food commodities	Ethylene	§180.1016
Garlic; Onion	Sulfuric acid	§180.1019
Capsicums (Pepper), nonbell	Sodium chlorate	§180.1020
Capsicums (Pepper), bell; Onion	Sesame stalks	§180.1087
Capsicums (Pepper)	Biochemical pesticide plant floral volatile attractant compounds: cinnamaldehyde, cinnamyl alcohol, 4-methoxy cinnamaldehyde, 3-phenyl propanol, 4-methoxy phenethyl alcohol, indole, and 1,2,4-trimethoxybenzene	§180.1127
Garlic; Onion	Diallyl sulfides	§180.1228
Capsicums (Pepper)	<i>Xanthomonas campestris</i> pv. <i>vesicatoria</i> and <i>Pseudomonas syringae</i> pv. tomato specific Bacteriophages	§180.1261
All sprouting root, tuber, and bulb crops (Includes horseradish, ginger, turmeric, garlic, onion)	1,4-Dimethylnaphthalene	§180.1142
Root and tuber vegetables (includes horseradish, ginger, turmeric)	1-Octanol	§180.1330

Table 2. Exemptions from the requirement of a tolerance that generally pertain to herbs and spices contained within the ASTA Spice List.
